

Working with construct [Even numbers]

- Create a sequence and then assign the value.
- Now we use write to put the condition and in body we use message box.
- After message box then again assign the values and put the conditions.
- Then debug the file and our output start displ. -aying on screen.

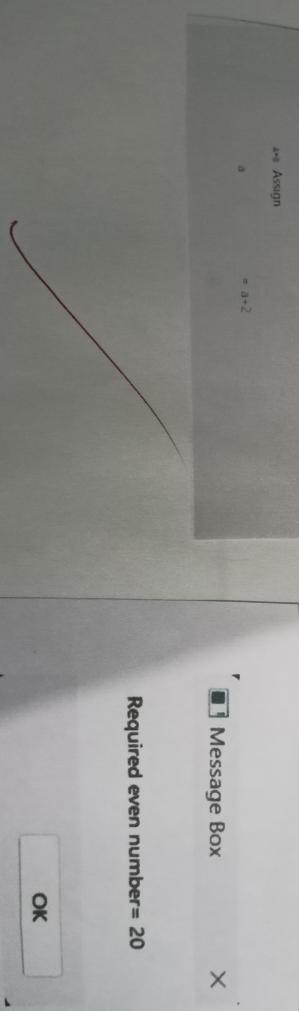

Required even numbers=2

OK

Required even number= 20

OK

DATE.....

Working with construct [odd numbers]

- Create a sequence and then assign the value.
- Now we use do while and then use the message box.
- After message box we use the assign operator and put the condition in it.

- Then apply the condition in it.
↳ → Then debug the file and our output start displaying on screen.
